

Dimetiri Consulting

Enhancing Your Business Intelligence

Company Sizes Served

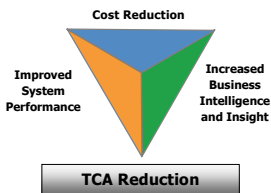

- :: Small Business
- :: Medium Businesses
- :: Large Businesses
- :: Very Large Businesses

Consider These Services If

- :: Your system can't expand
- :: System support is too costly
- :: Your system performs poorly

Why You Will Benefit

- :: Revealing health checks
- :: Low-TCA enablement
(Total Cost of Analysis)
- :: Improved business insight

Addressing the Business Challenge ‘Head On’

Have you experienced any of the following thoughts during the past year?

- :: *“The integration costs for our system implementation were too high”*
- :: *“Our Business Intelligence system costs too much to maintain”*
- :: *“Our data warehouse isn’t designed to provide all of the answers we really need”*
- :: *“Every time our needs change, we face either increased administration or the need to completely redesign through a new project...either way, our costs skyrocket”*
- :: *“We’re running out of capacity to fulfill the additional users, data, and queries, to the system”*
- :: *“We don’t have the budget to expand our data warehouse, nor the \$ to make it more relevant”*

These are typical issues that occur for most organizations who have existing solutions that require redesign to deliver full functionality or scale according to budget. Don’t worry – you’re not alone, and, we can help you pursue an enhanced direction.

Explore Your Possibilities...

...and Discover What Dimetiri Can Mean For You

At Dimetiri, we take pride in providing you with valuable services that deliver the highest quality and results. We deliver an end-to-end set of **Business Intelligence Enhancement** services to improve your existing data into insight - utilizing a proven approach to enrich information relevance, reduce ongoing system and operational cost, enable new capabilities, and accelerate time-to-insight:

System Health Checks to measure solution health according to met and missed business and technical requirements, and recommendations regarding how to rectify these short-comings at minimal cost.

Solution Assessments to appropriately scope, size, and plan a repair, enhancement, or system renewal effort.

Implementation Services to revisit requirements, and design, develop, and deploy your improved system.

Design Seminars to provide best practices and proprietary techniques via a classroom setting to improve your system.

To understand more about what makes our services important to you, let’s see what Dimetiri can mean to you...

System Health Checks

Whether your system is in need of repair, enhancement, or renewal, it's important to perform regular system health checks to ensure both immediate and sustainable fitness. For example, we check to confirm if:

- :: Existing requirements have been fulfilled correctly by the existing system;
- :: System Architecture and Design have been optimized to drive the best results at the lowest cost-of-ownership; and
- :: System Performance is meeting appropriate benchmarks, and expected system results

Solution Assessments

We conduct a review of your Business Intelligence system architecture and designs (or help you assess creating a new ones), including the underlying schema, extraction, transformation, and loading (ETL) batch processes, real-time (or near-real-time) processes, data cleansing techniques, database configuration, indexing strategy, aggregation strategy, and front end tool configuration. Remediation recommendations are provided at the end of the exercise, as well as complete project plan and price to deliver.

Implementation Services

Requirements Re-Validation: We sit down with your business and system owners, as well as key knowledge workers to verify and measure how the existing solution, or a proposed design, is meeting (or missing) both previously established and new requirements. We take great care to ensure each missed requirement is correctly identified, with its remaining fulfillment value assessed according to its relevance to ongoing business and system objectives. Next, we work with your project manager and team to effectively re-plan the scope, schedule, and budget for the remaining valued work.

Solution Delivery: We perform all tasks recommended in the System Health Reviews and Requirements Re-validation (if not already performed), and then execute the implementation and deployment of the designs according to plan.

Additional service components include:

- :: Project/program management
- :: Solution architecture
- :: Target data model design
- :: Extraction, Transformation, and Loading (ETL) processing design and development
- :: Tuning of database and ETL processes
- :: Front end business intelligence tool configuration and deployment
- :: Front end report creation and analysis
- :: End user & support staff training
